

This one day a week MAT 092 Introductory Algebra Classroom Hybrid course is a combination of the normal 3 day a week MAT 092 classroom course and an internet course. **It will take MORE of your time than the 3 day classroom course.** All homework and quizzes will be done online, on your own time. Three days of lecture will be crammed into one class a week. That one day will also be used for 5 in class proctored chapter tests and a final exam. You will be learning math on your own, a very hard thing to do, with only a little classroom time for explanations and questions. If you feel this is appropriate for you, welcome!
